

CVSked

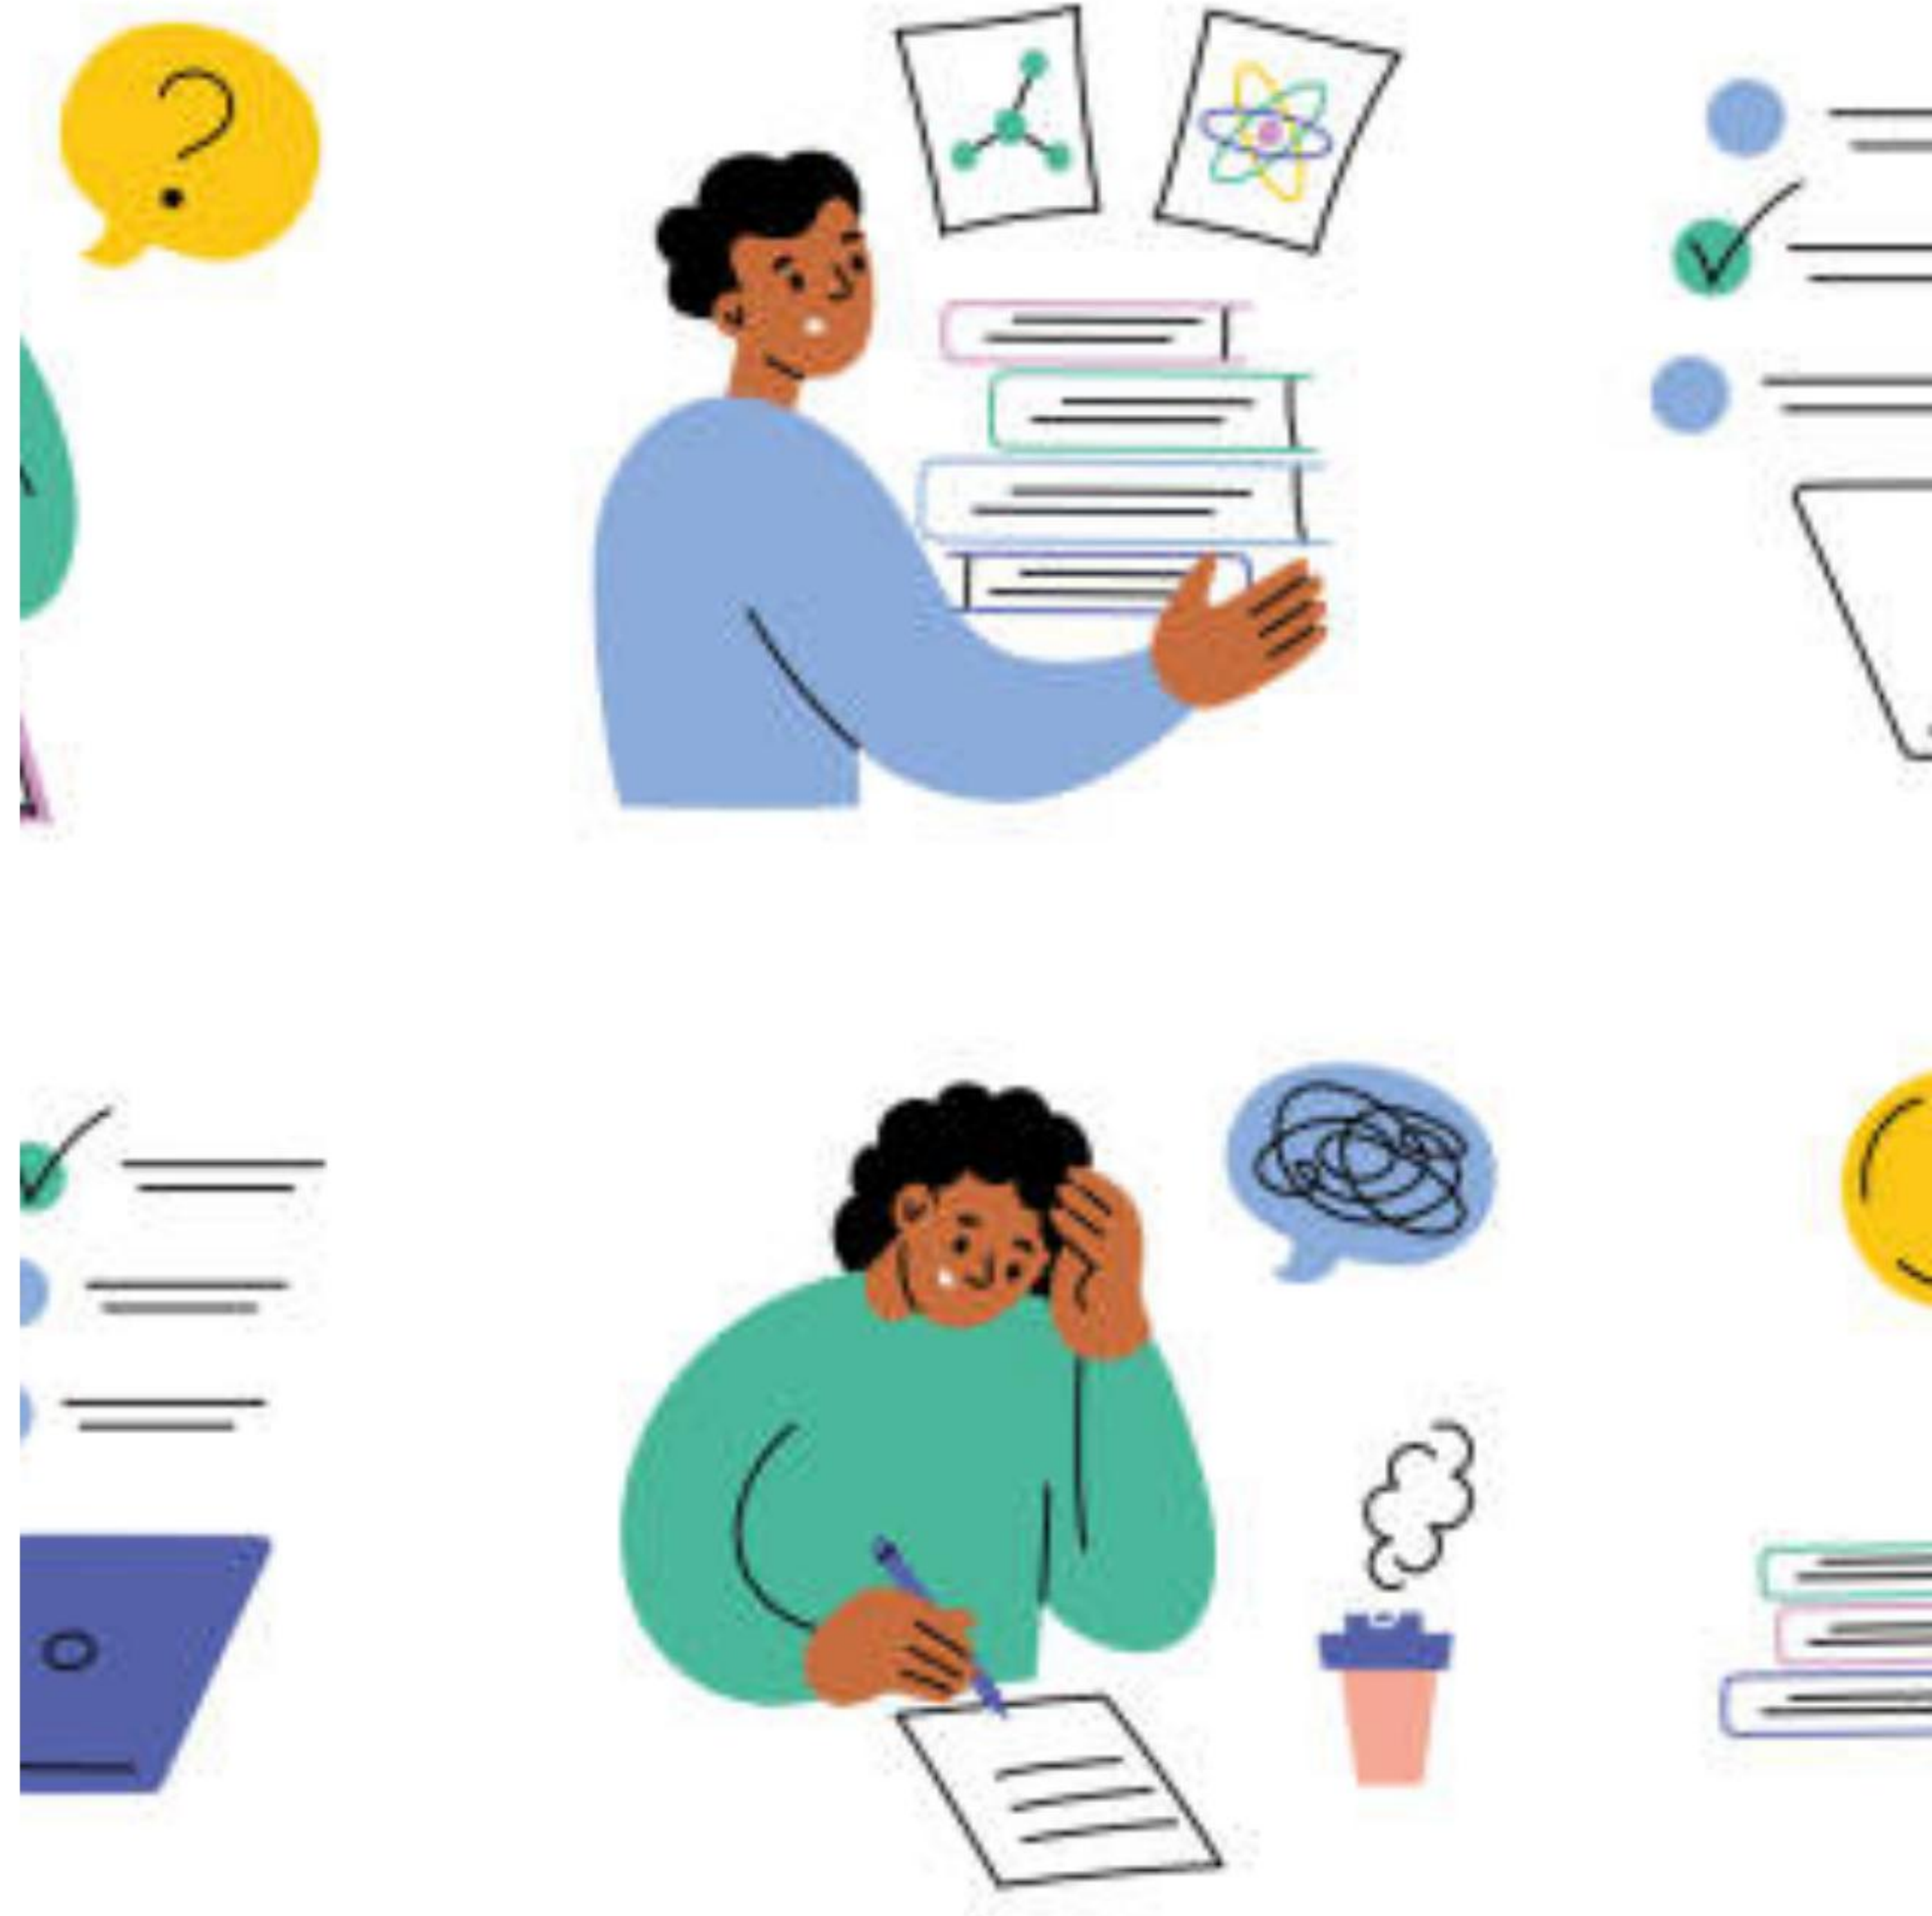

A Block-Based Scheduling System for Students

University Academic Project | Thesis Defense

Project Overview

CVSked helps students create and manage class schedules without the complexity of traditional calendar systems.

Designed specifically for the academic environment, our block-based approach simplifies the semester planning process, allowing students to visualize their week at a glance.

The Core Concept

Non-Calendar System

Traditional calendars can be cluttered with non-academic events. CVSked strips away the noise, focusing purely on the academic week cycle (Monday-Saturday) required for class blocks.

Block-Based Scheduling

Schedules are treated as movable "blocks" rather than time slots. This tactile, drag-and-drop interface mirrors how students mentally group their subjects, making adjustments intuitive and fast.

Key Features

Smart Scheduling

Create schedules based on specific time and day blocks. The system prevents conflicts and organizes the week efficiently.

Detailed Labeling

Input Course Codes, Subject Names, and Adviser Names directly into each block for complete academic context.

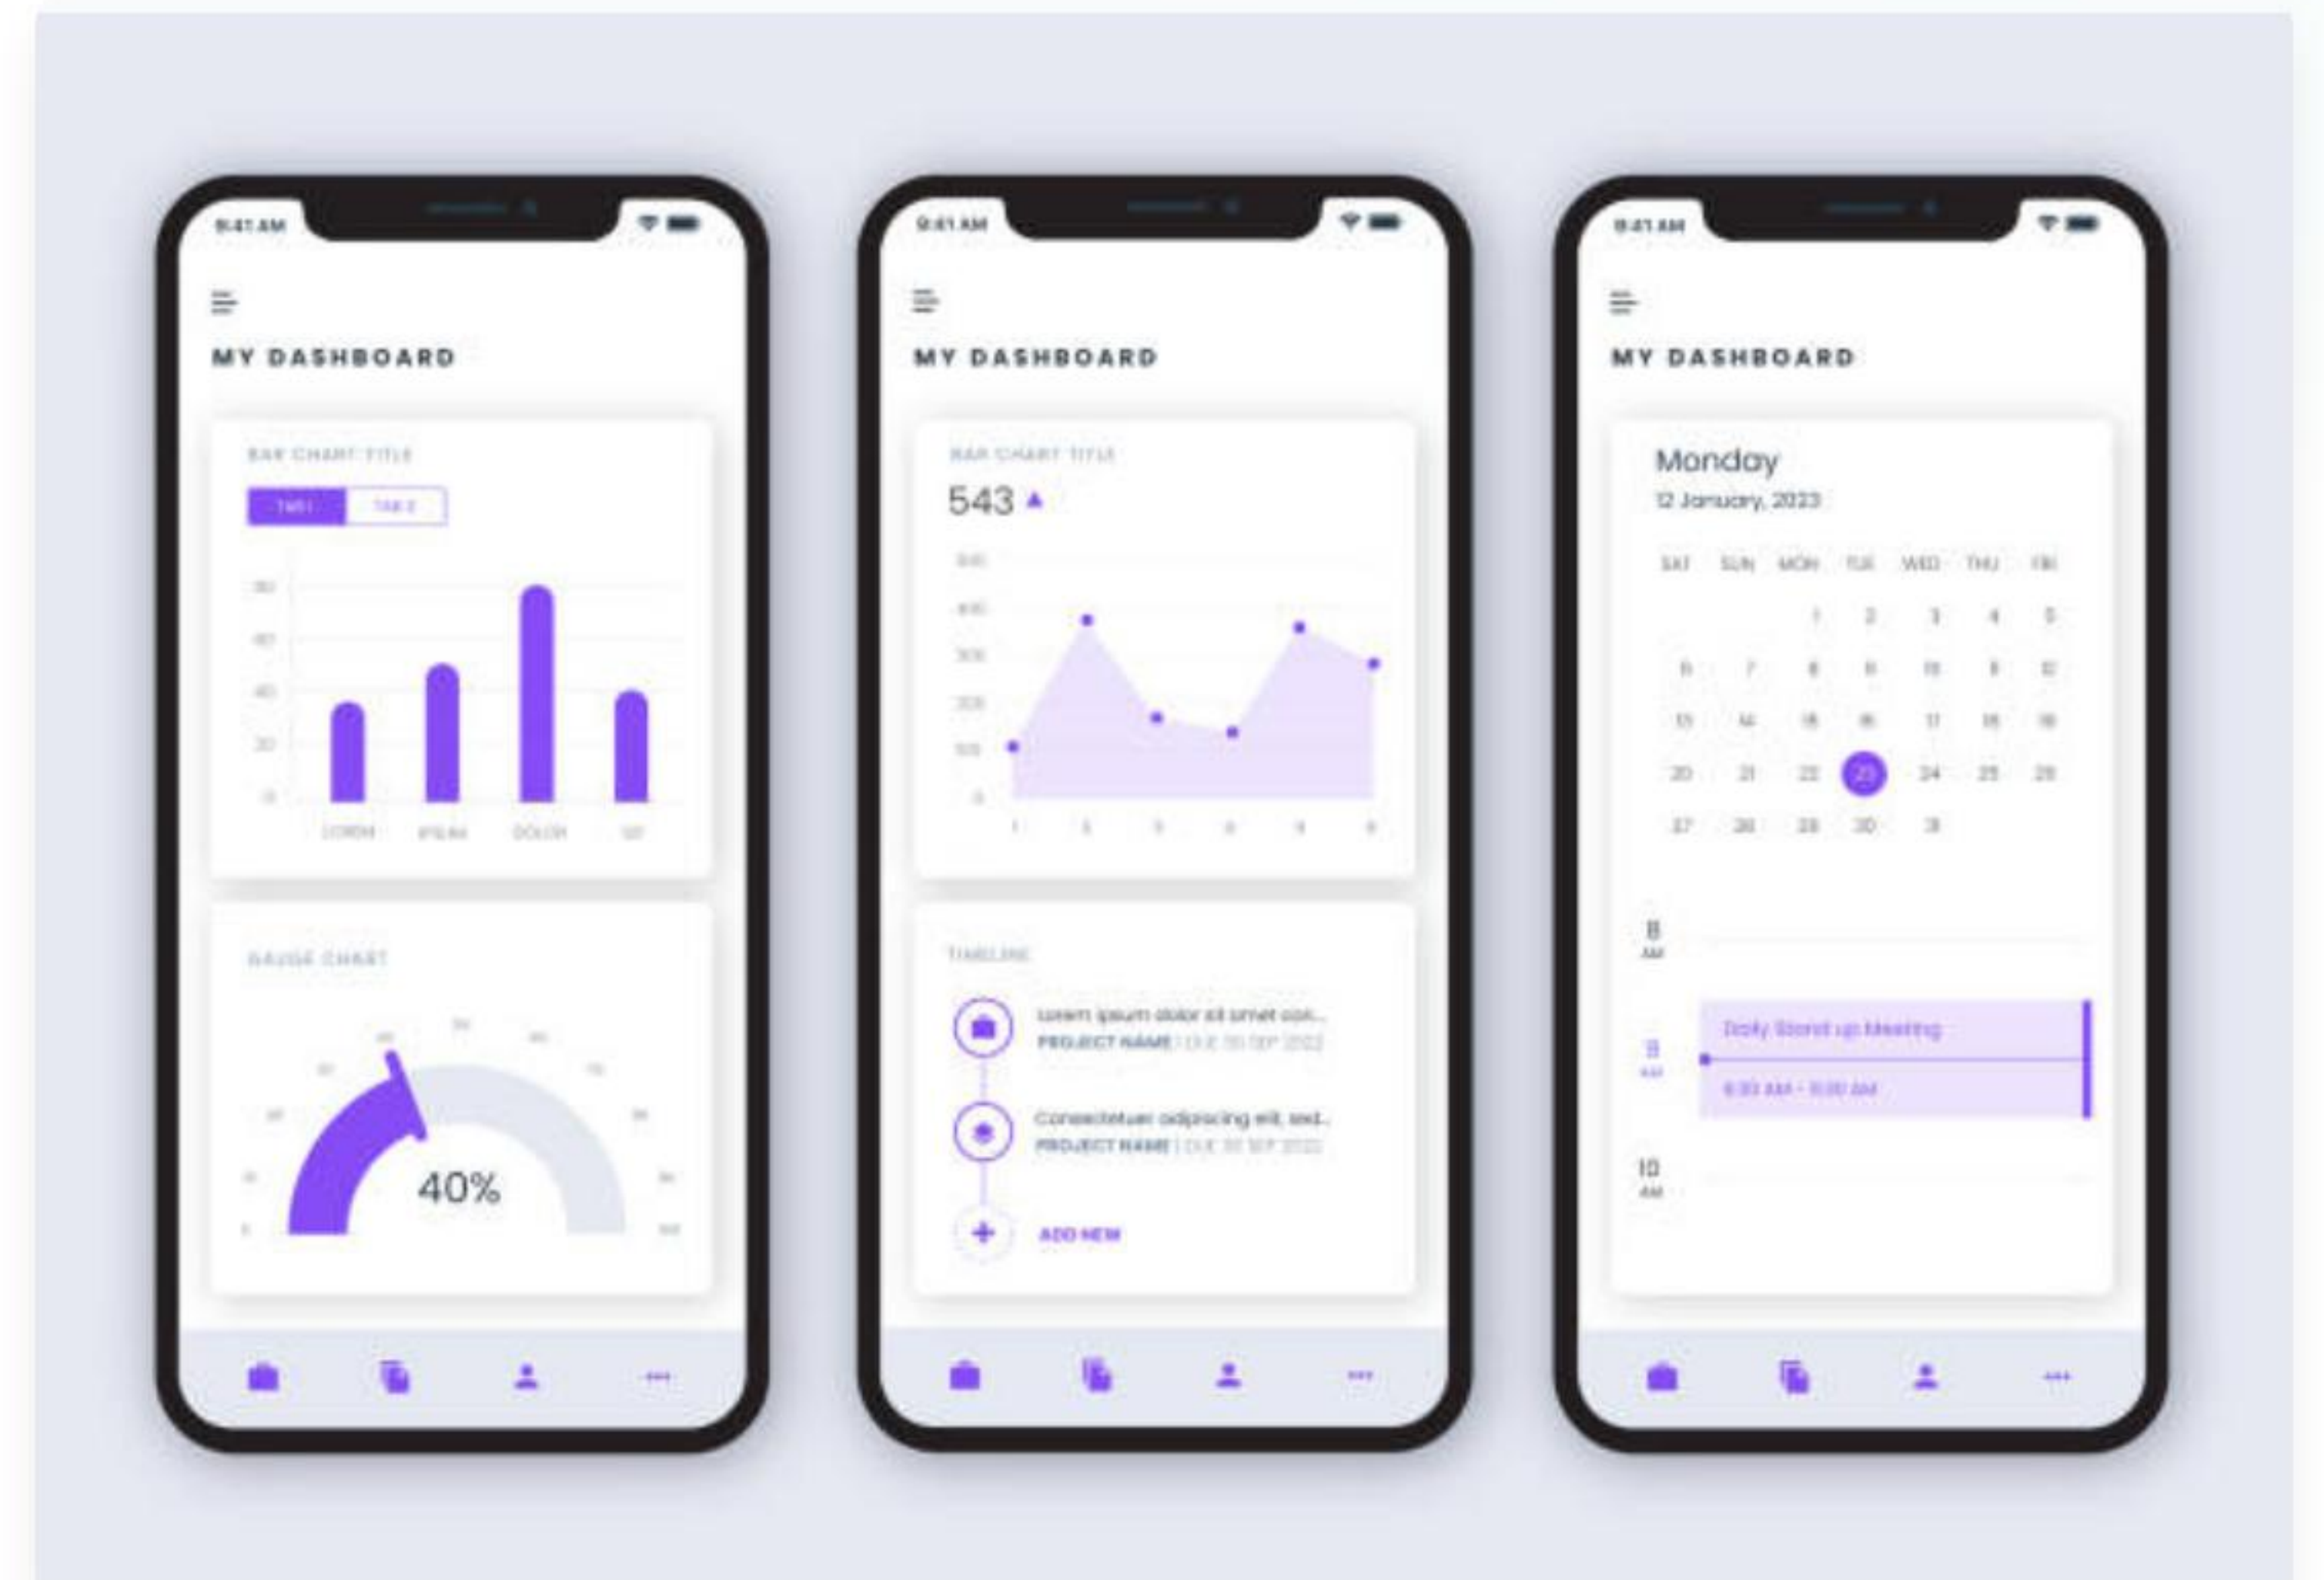

Notifications

User-defined alarms (e.g., 30 mins before class) ensure you never miss a lecture or laboratory session.

Sharing & Connectivity

CVSked goes beyond personal organization by enabling seamless sharing of academic data.

- ✓ **PDF Export:** Convert your dynamic schedule into a static, shareable PDF document with a single tap. Ideal for printing or emailing.
- ✓ **Drag-and-Drop Sharing:** Share complete schedule layouts with peers. The recipient receives the exact block formatting, preserving the visual structure.
- ✓ **Cross-Platform Ready:** Designed with Android guidelines in mind for a native experience.

Personalized Notes

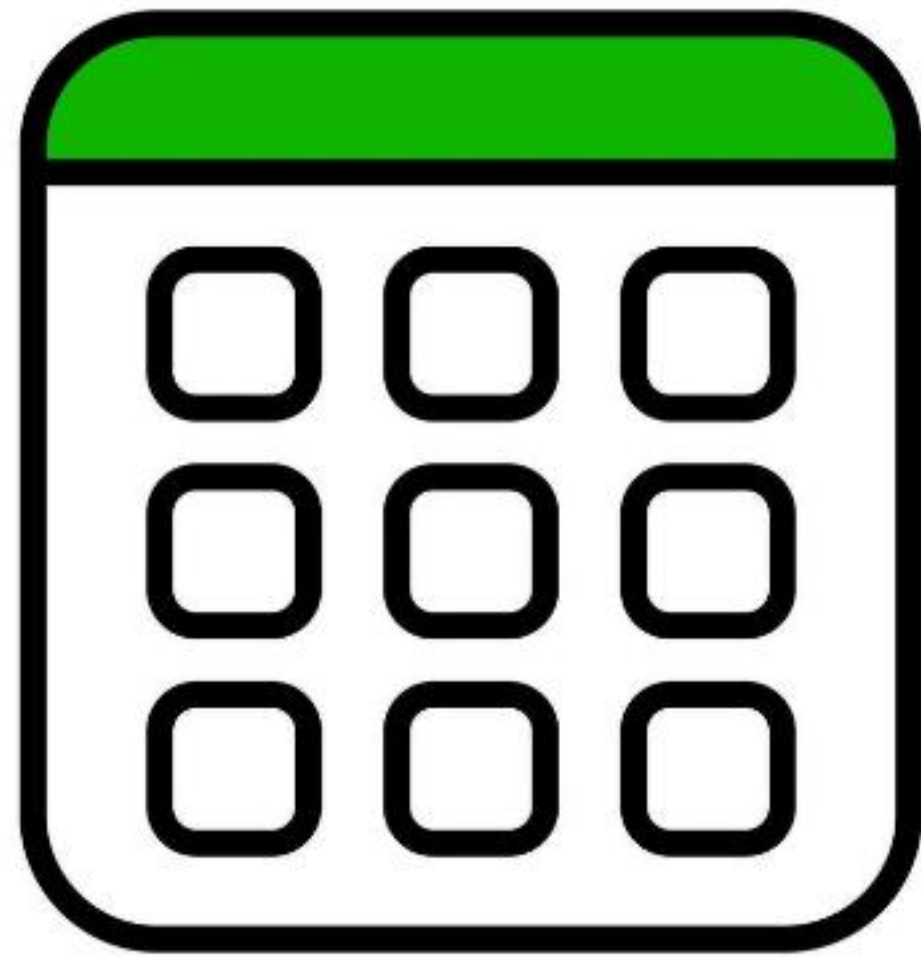

Contextual Note-Taking

Keep your academic life organized by linking personal notes directly to specific subjects and time blocks.

Whether it's a reminder for an upcoming quiz or a note about a room change, the information lives right where you need it—on your schedule.

Visual System Components

Grid Interface

Clean visual timetable

Alert System

Timely class reminders

Export Engine

Portable document format

Questions?

Thank you for listening.
